Insignificant Alteration - Permit

Re: Application No. 07-0466 in reference to the location below:

Approximately 100 feet southwest of Usquepaug Road (Rte. 138), approximately 3200 feet northwest of the intersection of Usquepaug Road (Rt. 138) and South County Trail (Rt. 2), Utility Pole Nos. 9, 10, 11, Assessor's Plat 13, Lot 4, South Kingstown, RI.

Dear Mr. Smith:

Kindly be advised that the Department of Environmental Management's ("DEM") Freshwater Wetlands Program ("Program") has completed its review of your **Request for Preliminary Determination** application. This review included a site inspection of the above referenced property ("subject property") and an evaluation of the proposed five-lot residential subdivision with associated roadway, stormwater drainage system, and four new single-family dwellings, each with attached garage, driveway, On-site Wastewater Treatment System (OWTS), private well, and landscaped yard, as illustrated and detailed on site plans submitted with your application. These site plans were received on March 3, 2008.

Our observations of the subject property, review of the site plans and evaluation of the proposed project reveals that alterations of freshwater wetlands are proposed. However, pursuant to Rule 9.00 of the Rules and Regulations Governing the Administration and Enforcement of the Fresh Water Wetlands Act (Rules), this project may be permitted as an **insignificant alteration** to freshwater wetlands under the following terms and conditions:

Terms and Conditions for Application No. 07-0466:

1. This letter is the DEM's permit for this project under the R.I. Fresh Water Wetlands Act, Rhode Island General Laws (RIGL) Section 2-1-18 et seq.
2. This permit is specifically limited to the project, site alterations and limits of disturbance as detailed on the site plans submitted with your application and received by the DEM on March 3, 2008. A copy of the site plans stamped approved by the DEM is enclosed. Changes or revisions to the project that would alter freshwater wetlands are not authorized without a permit from the DEM.
3. Where the terms and conditions of the permit conflict with the approved site plans, these terms and conditions shall be deemed to supersede the site plans.

4. You must notify this Program in writing immediately prior to the commencement of site alterations and upon completion of the project.
5. A copy of the stamped approved site plans and a copy of this permit must be kept at the site at all times during site preparation, construction, and final stabilization. Copies of this permit and the stamped approved plans must be made available for review by any DEM representative upon request.
6. Within ten (10) days of the receipt of this permit, you must record this permit in the land evidence records of the Town of South Kingstown and supply this Program with written documentation obtained from the Town showing this permit was recorded.
7. The effective date of this permit is the date this letter was issued. This permit expires four (4) years from the date of issue.
8. Any material utilized in this project must be clean and free of matter that could pollute any freshwater wetland.
9. Prior to commencement of site alterations, you shall erect or post a sign resistant to the weather and at least twelve (12) inches wide and eighteen (18) inches long, which boldly identifies the initials "DEM" and the application number of this permit. This sign must be maintained at the site in a conspicuous location until such time that the project is complete.
10. Temporary erosion and sediment controls detailed or described on the approved site plans shall be properly installed at the site prior to or commensurate with site alterations. Such controls shall be properly maintained, replaced, supplemented, or modified as necessary throughout the life of this project to minimize soil erosion and to prevent sediment from being deposited in any wetlands not subject to disturbance under this permit.
11. Upon permanent stabilization of all disturbed soils, temporary erosion and/or sediment controls consisting of hay bales and/or silt fence must be removed.
12. You are responsible for the proper operation, maintenance and stability of any mitigative features, facilities, and systems of treatment and control that are installed or used in compliance with this permit to prevent harm to adjacent wetlands.
13. You are obligated to install, utilize and follow all best management practices detailed or described on the approved site plans in the construction of the project to minimize or prevent adverse impacts to any adjacent freshwater wetlands and the functions and values provided by such wetlands.
14. A copy of this permit and a copy of the approved site plans must be forwarded to the OWTS Program of the DEM's office of Water Resources. A permit is needed from the OWTS Program prior to commencing any work on this project.
15. The existing brush and wood debris piles that have been deposited in the existing depression that is to be expanded into the proposed stormwater retention basin shall be removed and disposed of in accordance with all applicable regulations.

16. Long term maintenance plans for the proposed retention basin shall be modified to include a provision for deep tilling and revegetation of all grassed areas, to rejuvenate infiltration rates.
17. With respect to long term maintenance of the proposed retention basin, the grassed areas of the basin shall be mowed at least annually, and sediments shall be removed from the forebay and basin at least every five (5) years, with disposal in accordance with all applicable regulations.
18. This Program has made a specific revision to the approved site plans on sheet 4 of 4. This revision is clearly marked in red on the approved plans. This project must take place in compliance with this revision. Specifically, the approved limit of disturbance has been expanded to include all grade changes to accommodate the proposed retention basin.

Please note, a site inspection revealed a large pine tree approximately 30 inches in diameter in the area of the proposed retention basin. If the owner desires to save this tree, it may be possible to relocate a portion of the retention basin volume to an area of upland that is outside of the 50-foot perimeter wetland. A permit modification submitted to this Program will be necessary for this minor revision.

Pursuant to the provisions in Rule 7.09 and Rule 11.04, as applicable, any properly recorded and valid permit is automatically transferred to the new owner upon sale of the property.

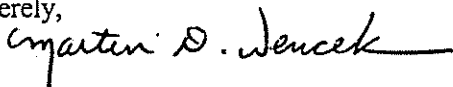

You are required to comply with the terms and conditions of this permit and to carry out this project in compliance with the Rules at all times. Failure to do so may result in an enforcement action by this Department. In permitting the proposed alterations, the DEM assumes no responsibility for damages resulting from faulty design or construction.

Kindly be advised that this permit is not equivalent to a verification of the type or extent of freshwater wetlands on site. Should you wish to have the types and extent of freshwater wetlands verified, you may submit the appropriate application in accordance with Rule 8.03.

This permit does not remove your obligation to obtain any local, state, or federal approvals or permits required by ordinance or law and does not relieve you from any duties owed to adjacent landowners with specific reference to any changes in drainage.

Please contact Claire Swift of this office (telephone: 401-222-6820 x 7418) should you have any questions regarding this letter.

Sincerely,

Martin D. Wencek, Permitting Supervisor
Office of Water Resources
Freshwater Wetlands Program
