Re: Application No. 13-0004 in reference to the location below:

Approximately 120 feet east of Evans Road, approximately 1800 feet north of the intersection of Evans Road and Farnum Road, Utility Pole No. 28, Assessor's Plat 16, Lot 123, Gloucester, RI.

Dear Ms. Macaulay:

Kindly be advised that the Department of Environmental Management's ("DEM") Freshwater Wetlands Program, ("Program") has completed its review of your proposed single family dwelling including an Onsite Wastewater treatment facility (OWTS), a private well and a driveway for the above referenced property ("subject property") as illustrated and detailed on site plans submitted with your application. The site plans referenced by this letter and on file with this Program were received on January 10, 2013.

Our inspection reveals that freshwater wetlands regulated by the DEM are present on or in close proximity to the subject property. Review of your proposed project, however, reveals that this project does not represent an alteration to these freshwater wetlands. It is our determination therefore that a permit for this project pursuant to the Freshwater Wetland Act (Rhode Island General Law Section 2-1-18 et seq.) or the Rules and Regulations Governing the Administration and Enforcement of the Freshwater Wetlands Act is not required. This Determination is specific to the proposed site alterations illustrated and detailed on site plans on file with this Program and is further predicated on the following:

1. Adequate measures are employed during and after site alterations to control soil erosion and to prevent any sediment from such erosion being deposited in any freshwater wetlands. You should consult the Rhode Island Soil Erosion and Sediment Control Handbook for appropriate methods to control erosion and prevent sediment from leaving your project site.
2. This determination does not authorize you to modify your project in such a way as to result in the following:
 - a. An increase in the rate and/or volume of surface water runoff flowing into, or draining or diverting from these wetlands; or
 - b. A diversion of groundwater into or away from these wetlands; or
 - c. A modification to the quality of water reaching these wetlands that could change their natural character.

3. This Program has made a specific revision to the site plan reviewed. This revision is clearly marked in red on the reviewed plan. This project must take place in compliance with this revision. Specifically, the north-northwestern portion of the limit of disturbance has been slightly shifted to the south by approximately five (5) feet so that no alterations occur within the 100-foot riverbank wetland.

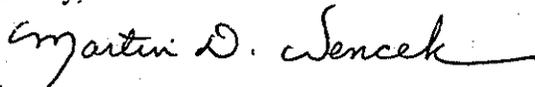

Please note that this Determination is specific to this proposed project, is valid for a limited period of four (4) years from the date of issue, and does not remove your obligation to obtain any local, state or federal approvals or permits required by ordinance or law.

ANY deviation from the proposed work as shown and modified on the reviewed site plan beyond the depicted limits of disturbance on the subject property without an additional permit issued by this Program can result in an enforcement action by this Department.

Kindly be advised that this determination is not equivalent to a verification of the type or extent of freshwater wetlands on site. Should you wish to have the types and extent of freshwater wetlands verified, you may submit the appropriate application in accordance with Rule 8.03.

Enclosed please find one (1) copy of your site plans stamped REVIEWED by this Program. Please contact Claire Swift (telephone: 401-222-6820x 7418) should you have any questions.

Sincerely,

Martin D. Wencek, Permitting Supervisor
Office of Water Resources
Freshwater Wetland Program
